First Generation Baptist Church Dallas, Texas

Two major parameters drove the design of this small 3,500 s.f. church – a very tight budget, and a site that is only 75 feet wide, but 690 feet deep. The layout of the pre-engineered metal building is compact and efficient, with a pronounced asymmetry in the worship space realized by the continuation of the steel frame up and past the gable roof, to create a north-facing wall for the twelve windows of the Apostles.
